

# *Shield of Safety*

## ABOUT US

---

RR Kabel Limited is one of the leading companies in the electrical sector offering products across categories including Wires & Cables, Fans, Lighting, Appliances, Wiring Devices and Switchgear. Our brand is known for quality, safety and trust. We have always strived to create products of the highest quality using latest innovative technology.

Our range of MCB, RCCB, Isolator, MCB Changeover & Distribution Board for both residential and commercial use are crafted with seamless precision and attention to detail adhering to the highest international safety standards, ensuring you get only the most efficient, reliable and long-lasting products at the most competitive prices.

Our Switchgear range complies with the latest IEC/IS standards and fully reinforces our commitment to environmental protection. It combines all the solutions for various requirements in one package, which makes it an 'All-in-one' solution.

## INDEX

# MINIATURE CIRCUIT BREAKER

# MCB

An MCB operates as an automatic switch that opens in the event of excessive current flowing through the circuit and once the circuit returns to normal, it can be reclosed without any manual replacement.

# MINIATURE CIRCUIT BREAKER (MCB)

(IS/IEC 60898 – 1)

## CONSTRUCTION

Miniature Circuit Breakers have precisely formed molded case & cover of flame-retardant high strength thermo-plastic material having high melting point, low water absorption, high dielectric strength and temperature with stand. The Switching Mechanism is independent, manual and trip free, i.e., the breaker trips internally even if the operating knob is held in ON position.

The Contact Mechanism comprises of fixed & moving contacts specially designed for reliability, long life and anti-weld properties. The Arc Extinguishing Device comprises of 12 plates arc chute. The arc under the influence of the magnetic field and arc guide is moved into the arc chute where it is rapidly split and quenched. The tripping mechanism is thermal magnetic type.

## THERMAL OPERATION

The thermal operation provides protection from moderate overload. During a current overload, a thermo-metallic element (bimetallic strip) deflects until it operates a latching mechanism allow the main contacts to open.

## MAGNETIC OPERATION

In a magnetic operation, large overloads or short circuit current actuates a solenoid causing a plunger to strike the latching mechanism rapidly opening the main contacts.

## MCB CHARACTERISTICS CURVE

Type B characteristics curves

Type C characteristics curves

This Characteristics is the curve between Release Current and Tripping time.

THERMAL TRIPPING			MAGNETIC TRIPPING			
As Per	No Tripping	Tripping	Time	Hold	Trip	Time

\*1P+N = Single Pole & Neutral

\*2P = Double Pole

\*3P = Three Pole

\*3P+N = Three Pole & Neutral

\*4P = Four Pole

## MCB FEATURES

### LARGE & DUAL TERMINALS

It can accommodate cables up to 25 sq.mm cross section area thus making it suitable for copper as well as Aluminium cables.

### IP 20 PROTECTION

No accidental Contact/ Shock from live part during installation

### MCB PADLOCK

A lockout or MCB padlock can prevent shocks or extreme injury that would result from someone prematurely reactivating a circuit.

### ON/OFF INDICATION

Red & Green flag indication provided below the knob gives an indication of positive electrical ON/OFF contact status irrespective of the mounting or knob position even from a distance.

### ENERGY LIMITING CLASS 3

Low let-through energy  $I^2t$  under short-circuit conditions ensures a longer life of contacts and reduces the thermal stresses in the distribution circuit.

### BI-STABLE DIN CLIP

Easy Mounting and Strong hold on DIN Rail

### AIR CIRCULATION

When two poles are placed adjacent to each other, these channels form a tunnel resulting in an effective air circulation around individual poles.

### BREAKING CAPACITY

10 kA

### FIRE RETARDANT

Fire Retardant Body materials ensure extra safety

### LOW POWER CONSUMPTION

Cost effective and energy saving. The Watt loss of MCBs is extremely low providing valuable energy savings over its entire life cycle.

Dimensions in mm

# RESIDUAL CURRENT CIRCUIT BREAKER RCCB

A residual-current device, or Residual Current Circuit Breaker, is a safety device that quickly breaks an electrical circuit to protect equipment and to reduce the risk of serious harm from an electric shock.

# RESIDUAL CURRENT CIRCUIT BREAKER (RCCB)

(IS 12640-1 & IEC 61008-1)

## WORKING PRINCIPAL

RCCB works on the principle of Kirchhoff's law, which states that the incoming current must be equal to the outgoing current in a circuit. RCCB thus compares the difference in current values between live and neutral wires. Ideally, the current flowing to the circuit from the live wire should be the same as that flowing through the neutral wire. In case of a fault, the current from the neutral wire is reduced, the difference between the two is known as Residual Current. On spotting a Residual Current, the RCCB is triggered to trip off the circuit.

A test circuit included with the Residual Current device ensures that the reliability of RCCB is tested. When the test button is pushed, the current starts to flow through the test circuit. As it creates an imbalance on the neutral coil of the device, the RCCB trips and the supply is disconnected thereby checking RCCB's reliability.

	DP	FP
Standard Conformity	IS 12640-1/IEC 61008-1	
Protection	Leakage Current / Ground Fault	
Rated Current (In)	25A, 40A, 63A	
Rated Residual Current	30mA, 100mA, 300mA	
Rated Voltage	240V	415V
Tightening Torque	2Nm	
Breaking Capacity	6kA	
Frequency	50 Hz	
Rated Making Breaking Capacity	500A or 10 In whichever is Greater	
Terminal Capacity	25mm <sup>2</sup>	
Terminal Protection	IP20	
Operating Temp	-5° C to +55° C	
Endurance Mechanical & Electrical Cycles	4000	
Method of Mounting	Clip on Din Rail (35 x 7.5 mm)	

**RCCB DP, FP Dimensions in mm**

**RCCB FEATURES**

**LARGE TERMINATION**  
It can accommodate cables upto 25sq.mm cross section area thus making it suitable for copper as well as aluminum cables.

**COMBI-HEAD SCREW**  
Ease of clamping or tightening the screw.

**EASY DIN EXTRACTION**  
No dismantling of bus bar to remove RCCB – Unique mounting assembly allows to remove it without disturbing other devices

**TEST BUTTON**  
To check the health of device periodically.

**REAL TRIP INDICATION**  
It provides the real trip indication of fault occurred in the circuit.

**FIRE RETARDANT**  
Fire Retardant Body materials ensure extra safety.

# ISOLATOR

The isolator is a switch which isolates the part of the circuit system when it is required. Electrical isolators are the separate part of the system that is created for safe maintenance. Isolators are generally used at the end of the breaker to repair or to replace.

# ISOLATOR

(IEC 60947 - 3)

## TECHNICAL SPECIFICATION

PARAMETER	REMARKS
Standard Conformity	IS/IEC 60947-3
Rated Current (In)	40A, 63A, 100A

## ISOLATOR FEATURES

### LARGE & DUAL TERMINALS

Suitable for copper and aluminum cables, these terminals are compatible with cables having cross-section area up to 35mm<sup>2</sup> compatible with cables having cross-section area up to 35 mm<sup>2</sup> enhancing safety and life of the device.

### BI-STABLE DIN CLIP

Every device is provided with a dual position DIN rail clip, so it becomes much easier to change a device from a device bank connected to a bus-bar, without disturbing the existing wiring

### IP 20 PROTECTION

No accidental Contact/ Shock from live part during installation

### FIRE RETARDANT

Fire Retardant Body materials ensure extra safety

# MCB CHANGEOVER

MCB Changeovers are designed to transfer a house or business unit electricity from the commercial power grid to a local generator when outage occurs. Also known as “transfer switches,” they connect directly to the generator, commercial power supply or line, and the house.

# MCB CHANGEOVER

(IEC 60947-3)

## MCB CHANGEOVER Dimensions in mm

## MCB CHANGEOVER FEATURES

### LARGE CABLE TERMINALS

Suitable for copper and aluminum cables, these terminals are compatible with cable 10 mm<sup>2</sup> up to 40A/25mm<sup>2</sup> for 63A cross section area.

### IP 20 PROTECTION

No accidental Contact/ Shock from live part during installation

### CENTER POSITION ON/OFF

Front operation with three stable Position I-O-II where center position is OFF

### COOLER OPERATION

Grooves provided on the outer body, so that when individual poles are placed adjacent to each other in a distribution board it forms a very effective channel for better air circulation, resulting into a cooler operation

### FIRE RETARDANT

Fire Retardant Body materials ensure extra safety

# DISTRIBUTION BOARDS

Distribution Board is an equipment which consists of busbars, possible switches, fuse links and automatic protective equipment, for connecting, controlling and protecting a number of branch circuits fed from one main circuit of a wiring installation in a building or premises.

# DISTRIBUTION BOARD (DB)

(IEC 61439-3 / IS 13032 / IS 8623-3)

A Distribution Board (also known as panel board, breaker panel, or electric panel) is a component of an electricity supply system that divides an electrical power feed into subsidiary circuits while providing a protective fuse or circuit breaker for each circuit in a common enclosure.

## DB'S UNIQUE FEATURES

### DOUBLE MOUNTING KEY HOLES

DB is provided with key holes for flush as well as surface mounting.

### DOOR EARTHING

Door earthing makes the entire DB totally shock Proof.

### INSULATED COPPER BUS BAR

All the DBs have this facility for quick & easy installation for rating.

### RAISED EARTH/ NEUTRAL LINK

High quality brass neutral and earth links to prevent temperature rise and promote safe operation

### LOCKING KNOB

Smooth and easy to operate door opening and closing with aesthetically designed knob

### DETACHABLE GLAND PLATE

Top & Bottom suitable for the connection
